Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Glossary of research economics - econterms

In economics, elasticity is the measurement of how an economic variable responds to a change in another. It gives answers to questions such as: "If I lower the price of a product, how much more will sell?" "If I raise the price of one good, how will that affect sales of this other good?"
