- To build any electronic circuit, you'll need some combination of three basic components, resistors, capacitors, and inductors. It's easy to look at an electronic schematic and follow along to assemble a circuit with those parts, but if you want to design your own circuits or debug problems in an existing one, you need to understand what each of those components can actually do.

Electric charge is nothing but flow of electrons from one object to another. We all know that an atom is made up of electrons, protons and neutrons (look at the diagram on the right that explains the structure of an atom). Electrons are negatively charged and protons are positively charged while neutrons are neutrally charged.
