Cheat Sheet : All Cheat Sheets in one page

The Windows API, informally WinAPI, is Microsoft's core set of application programming interfaces (APIs) available in the Microsoft Windows operating systems. The name Windows API collectively refers to several different platform implementations that are often referred to by their own names (for example, Win32 API); see the versions section. Almost all Windows programs interact with the ...

The Internet Server Application Programming Interface (ISAPI) is an N-tier API of Internet Information Services (IIS), Microsoft's collection of Windows-based web server services. The most prominent application of IIS and ISAPI is Microsoft's web server.. The ISAPI has also been implemented by Apache's mod_isapi module so that server-side web applications written for Microsoft's IIS can be used ...

Note: When talking or reading about programming, you must consider the language background and the topic of the source. It is very rare to see a C++ programmer use the words procedure or subprogram, this will vary from language to language. In many programming languages the word function is reserved for subroutines that return a value, this is not the case with C++.
