FLOAT GLASS TECHNOLOGY In order to retain its position as world leader in glass technology and innovation Pilkington invests significant research funds into the optimisation of the manufacturing process. In recent years key advances have taken place in the development of glass compositions, in float furnace design and operation and in the forming process.

The book argues that the nature of the industry should define the level of the analysis. This is done by revisiting the flat glass industry study, on which Anderson and Tushman's (1990) dominant design model is partly based. In their study Anderson and Tushman defined the flat glass industry based on four-digit SIC codes.

A revolutionary dominant design : the float glass

Their broader industry definition revealed only the flat glass industry not two sub-industries: plate glass and sheet glass. According to this study the nature of the industry should define the level of the analysis and performance parameter should defined be based on effectiveness instead of efficiency of the innovation.

However, a longitudinal case study of two non-assembled products, sheet glass (1920-1984) and plate glass

(1900-1984) and one radical innovation, float glass in both the North American (NA) sheet glass and plate glass industries, indicates that there are interorganizational effects in the diffusion of nonassembled products.

Impacts of Networks on the Emergence of Dominant Design

Advances in thin glass manufacture and in coatings are opening new opportunities in electronics. NSG Group is a technology leader in glass. The Float Process, invented by Sir Alastair Pilkington in 1959, is used throughout the world to produce high quality glass for buildings and vehicles.
