### **Function Spaces Proceedings Of The Sixth Conference**

The idea of constructing a space of functions taking values in a locally convex space  $E$  from a linear space of scalar valued functions is well known. We can, for example, define a space consisting of all  $E$ -valued functions  $f(t)$  such that for all elements  $e \in E$  of the dual  $E'$  of  $E$ .

Function Spaces 6 As we have indicated, convergence in the product topology is the same as pointwise convergence of functions: Theorem 2 Convergence in the Product Topology Let  $X$  be a set, let  $Y$  be a topological space, let  $f_n$  be a sequence in  $Y^X$ , and let  $f \in Y^X$ . Then  $f_n \rightarrow f$  under the product topology if and only if the functions  $f_n$  converge pointwise to  $f$ .

This book features original research and survey articles on the topics of function spaces and inequalities. It focuses on (variable/grand/small) Lebesgue spaces, Orlicz spaces, Lorentz spaces, and Morrey spaces and deals with mapping properties of operators, (weighted) inequalities, pointwise multipliers and interpolation.

One of the most important function spaces is  $L^2(a,b)$  - the space of square integrable functions on the interval  $(a,b)$ . The  $L^2$  norm is  $\|f\|_2 = \sqrt{\int_a^b |f(x)|^2 dx}$ . The precise definition of  $L^2(a,b)$  is based on Lebesgue integration theory, which is beyond the scope of these notes.
