

### **functions modeling change a pdf**

Average rates of change can be calculated not only for functions given by tables but also for functions given by formulas. The average rate of change of a function  $y = f(x)$  from  $x = a$  to  $x = b$  is given by the difference quotient  $\frac{f(b) - f(a)}{b - a}$ .

In probability theory, a probability density function (PDF), or density of a continuous random variable, is a function, whose value at any given sample (or point) in the sample space (the set of possible values taken by the random variable) can be interpreted as providing a relative likelihood that the value of the random variable would equal that sample.
