Resistance to flow is an important engineering subject; it is applicable to every branch of engineering where flows of liquids and gases take place. The importance of exact and true values of flow resistance is, primarily, a question of determining the pumping " or power " requirements for any apparatus or, eventually, for the entire plant involved in the motion of fluid.

The possibility to find correct values of entrance resistance coefficients of pipes in hydraulic systems given in available manuals, handbooks or standards and similar materials is only illusory. This is no surprise, since the coefficients are determined by specific shapes of a given minor loss and, in general, depend on the Reynolds number ( $Re$ ).
