The HEUI fuel system utilizes a hydraulically actuated electronically controlled unit injector (7) . All fuel systems for diesel engines use a plunger and barrel in order to pump fuel under high pressure into the combustion chamber. This fuel is pumped into the combustion chamber in precise amounts in order to control engine performance.

The HEUI system is identified by the time series of injection pressure and fuel rate. The input data representing the injection pressure is given as multi-sinusoidal waves, while the corresponding output data is the fuel rate. These are shown in Fig. 3. Table 1.
