Introduction. The shortest path between two given points in a curved space, assumed to be a differential manifold, can be defined by using the equation for the length of a curve (a function  $f$  from an open interval of  $\mathbb{R}$  to the space), and then minimizing this length between the points using the calculus of variations. This has some minor technical problems, because there is an infinite ...

In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately below it.
