Industrial Solutions. Become an Industry 4.0 pioneer with the most-secure and reliable MCU, wireless and memory solutions.

Microcontrollers, Connectivity, Memory Solutions

2. TYPICAL TRANSISTOR CIRCUIT- This is a silicon transistor circuit showing typical voltage values. When the forward base/emitter voltage is 0.6 to 0.7 V, the transistor is silicon. Germanium transistors will have a forward base/emitter bias voltage of 0.2 to 0.3 V This is a silicon transistor because 2.6 base volts minus 1.9 emitter volts equal a forward bias of 0.7 volts indicating a silicon ...

SIEMENS PM240-2 HARDWARE INSTALLATION MANUAL Pdf Download.

A p-n junction diode is made of a crystal of semiconductor, usually silicon, but germanium and gallium arsenide are also used. Impurities are added to it to create a region on one side that contains negative charge carriers (electrons), called an n-type semiconductor, and a region on the other side that contains positive charge carriers (), called a p-type semiconductor.

A light-emitting diode (LED) is a semiconductor light source that emits light when current flows through it. When a current passes through the diode, which is formed of two different semiconductor materials, electrons are able to recombine with electron holes, releasing energy in the form of photons. This effect is called electroluminescence. The color of the light (corresponding to the energy ...
