When working with files and resources over a network, you will often come across URIs and URLs which can be parsed and worked with directly. Most standard libraries will have classes to parse and construct these kind of identifiers, but if you need to match them in logs or a larger corpus of text, you can use regular

expressions to pull out information from their structured format quite easily.

The Year 2000 problem, also known as the Y2K problem, the Millennium bug, the Y2K bug, or Y2K, is a class of computer bugs related to the formatting and storage of calendar data for dates beginning in the year 2000. Problems were anticipated, and arose, because many programs represented four-digit years with only the final two digits "â€" making the year 2000 indistinguishable from 1900.
