The reuse of containers is often thought of as being a step toward more sustainable packaging. Reuse sits high on the waste hierarchy. When a container is used multiple times, the material required per use or per filling cycle is reduced.

In software engineering, a software development process is the process of dividing software development work into distinct phases to improve design, product management, and project management. It is also known as a software development life cycle. The methodology may include the pre-definition of specific deliverables and artifacts that are created and completed by a project team to develop or ...

The Intel Â® Quartus Â® Prime Pro Edition software supports block-based design flows, also known as modular or hierarchical design flows.. You can designate a design block as a design partition in order to preserve or reuse the block. A design partition is a logical, named, hierarchical boundary assignment that you can apply to a design instance.

Hi Surya, thanks for your question. You mention C-Based Stimulus - for a description and example see the CBasedStimulus cookbook page.. However I think what you are really asking for is not stimulus but rather a golden reference model, written in C and instantiated using SV DPI alongside an SV/UVM Scoreboard.

Can someone provide an complete working example for C

In this paper we show how to create a UVM testbench with interface connections that universally work in any design simulation context. A harness is a common solution for encapsulating interfaces, binding them to the DUT, and publishing virtual interface assignments.
