At MACOM we offer a broad range of TMOS and DMOS RF power MOSFET transistor products as discrete devices from DC to 1.0 GHz. Our high power MOSFET transistors are ideal for civil avionics, communications, networks, radar, and industrial, scientific, and medical applications.

A low-dropout or LDO regulator is a DC linear voltage regulator that can regulate the output voltage even when the supply voltage is very close to the output voltage.. The advantages of a low dropout voltage regulator over other DC to DC regulators include the absence of switching noise (as no switching takes place), smaller device size (as neither large inductors nor transformers are needed ...

The FET controls the flow of electrons (or electron holes) from the source to drain by affecting the size and shape of a "conductive channel" created and influenced by voltage (or lack of voltage) applied across the gate and source terminals. (For simplicity, this discussion assumes that the body and source are connected.) This conductive channel is the "stream" through which electrons flow ...

â€¢ NMOS pass FET is easier to compensate at low loads and dropout, due to the higher output impedance of PMOS. â€¢ NMOS pass FET are smaller due to weaker drive of PMOS.

Radio Electronics Pages. General information. The laws regarding the use of the radiospectrum are actually fairly uniform, and established by international treaty, for the obvious reason that radio signals do not respect international borders.

In the mid 1970s large numbers of small FM transmitters, operating in the FM radio broadcast band (88-108 MHz) appeared on the market. It started with a self-build kit from the Danish manufacturer Jostykit that allowed everyone to build a small FM transmitter for a few Euros.
