If you go to the country, far from city lights, you can see about 3,000 stars on a clear night. If your eyes were bigger, you could see many more stars. With a pair of binoculars, an optical device that effectively enlarges the pupil of your eye by about 30 times, the number of stars you can see increases to the tens of thousands. With a

The composition and structure of stars changes at different stages in their life cycle. Stars in the Milky Way can be different from the Sun in size, temperature, age and brightness. The Sun is a main sequence star. Stars can be described as having apparent magnitude, absolute magnitude and luminosity. Other planets orbit around other stars.
