Sign languages (also known as signed languages) are languages that use the visual-manual modality to convey meaning. Language is expressed via the manual signstream in combination with non-manual elements. Sign languages are full-fledged natural languages with their own grammar and lexicon. This means that sign languages are not universal and they are not mutually intelligible, although there ...

Babbling is a stage in child development and a state in language acquisition during which an infant appears to be experimenting with uttering articulate sounds, but does not yet produce any recognizable words. Babbling begins shortly after birth and progresses through several stages as the infant's repertoire of sounds expands and vocalizations become more speech-like.

How baby sign language works. It's not surprising that babies can learn how to sign. Both their understanding of language and their motor skills develop much faster than their ability to speak. And they love to mimic: Most babies, for example, discover how to wave and point long before they can say, "bye bye" or "look at that!"
