Silicones, also known as polysiloxanes, are polymers that include any inert, synthetic compound made up of repeating units of siloxane, which is a chain of alternating silicon atoms and oxygen atoms, combined with carbon, hydrogen, and sometimes other elements. They are typically heat-resistant and either liquid or rubber-like, and are used in sealants, adhesives, lubricants, medicine, cooking ...

A shadow biosphere is a hypothetical microbial biosphere of Earth that uses radically different biochemical and molecular processes than currently known life. Although life on Earth is relatively well-studied, the shadow biosphere may still remain unnoticed because the exploration of the microbial world targets primarily the biochemistry of the macro-organisms.

1. Introduction. The ocean is the source of life, and the sea area covers about 71% of the world's total oceans and land. Marine life has higher bioactivity and more functions compared with organisms on land, but are less explored and investigated.

A novel air-stable layered-structured Mn-based oxide $\text{Na}_{4/7}[\text{Mn}_{6/7}(\text{Mn})_{1/7}]\text{O}_2$ is presented. The presence of native vacancies gives this material high structural flexibility and stability upon Na^+ ion extraction and insertion and enables high reversibility of oxygen redox reactions.
